6. Operațiuni de specialitate realizate:

Măsurătorile topografice au fost efectuate în sistem de referință „Stereografic 1970”, sistem de referință Marea Neagra 1975, cu corecții diferențiale provenite de la ROMPOS, prin metoda RTK în timp real (ROMPOS).

Ridicarea în plan a detaliilor a fost efectuată cu echipamente South S 82V– ce funcționează în două frecvențe L1, L2 (GPS-GLONASS), cu precizia:

- $\pm 10 \text{ mm} + 1 \text{ ppm RMS}$
- $\pm 20 \text{ mm} + 1 \text{ ppm RMS}$

Informațiile obținute asigură realizarea cu succes a scopului propus, prin încadrarea indicatorilor principali ai metodei în limitele normale, astfel:

- Elevația obstacolelor să fie mai mică de 15m;
- Să nu fie nici o transmisie în vecinătatea zonei de lucru;
- Parametrii de configurare să fie introduși corect (rata de înregistrare);
- Valoarea indicatorului GDOP să fie mai mică de 8, acesta fiind influențat de:
 - Numărul sateliților vizibili în zona de lucru;
 - Înălțimea sateliților vizibili în zona de lucru;
 - Poziția orbitelor sateliților vizibili deasupra orizontului.

Transcaltulul coordonatelor a fost facut cu transdat 4.01.

La birou au fost determinate coordonatele tuturor punctelor și s-a realizat planul topografic la scara 1:1000. Calculul analitic al suprafeței s-a făcut din coordonatele punctelor de contur.
